ACTIVITY BOOKLET

WORLD OCEANS DAY
JUNE 8th

Traveling like a raindrop

Perez Castro, Recreational Activities Supervisor at Fundación Temaikèn

Learning objective and notes	Materials and set up
Raise awareness about the conservation of the water and the water cycle. Kids 2 to 12 years old and their families. Works best with: a large group.	- Indoor or dark place - Microphone - Blue glow sticks

Activity description

Children represent raindrops, using the blue glow sticks. The interpreter starts talking about the water cycle asking open questions to the children, so they are part of the narration.

The kids are raindrops in the ocean, they take each other's hands and move as if they are sailing in the ocean. Then the hot sun (performed by a dad or mom) evaporates the raindrops forming the clouds. The clouds are moved by the strong wind around the place.

And the story goes on and on… ending in raindrops in the ocean. When the raindrops are back in the ocean, they can see the sea life which needs water to live and the narrator guides questions and answers to raise awareness about the conservation of the water.
